

## EDGE™ EarthGuard® Pellets – the ideal solution for erosion control and vegetation on solar farms

Controlling erosion and establishing vegetation on solar farms is a challenge. Splash erosion created by heavy runoff from panels coupled with additional concentrated flow between panels creates a frustrating situation for developers and contractors.

For erosion control contractors, installation of traditional hydraulically spray applied erosion control products is challenging due to tight spacing limiting hydroseeder access and overspray soiling the panels. EDGE™ EarthGuard® Pellets are a solution that can be applied easily between solar panel rows.

EDGE™ EarthGuard® Pellets are a dry applied, highly performing erosion control product that will control erosion and help vegetate disturbed soils while offering a fast and cost-efficient application method. EDGE™ Can be applied by hand or with a spreader, and is activated by mother nature or by irrigation.
